

Lectures

In preparing to go online, you will want to decide how you want to provide content and resources to your students. There are multiple options to choose from. First, you need to decide what you will be providing and whether it will be asynchronous (everyone isn't meeting at the same time), synchronous (everyone meets at the same time), or a combination of both.

Asynchronous

- Content Tool in iLearn
 - The Content Tool allows you to link to documents, links, external videos, videos within Kaltura, other tools within iLearn and more. This tool is within iLearn and requires students to login.
 - Course Syllabus – [Watch the video on how to add your Course Syllabus](#)
 - Content – [Watch the D2L Brightspace \(iLearn\) Content Tool Playlist](#).
- TTU WordPress Website
 - This site is for faculty websites and can be set up to provide links and resources to students. This site is open to the public, no password required by students.
 - [Request a WordPress site](#)
- Google Classroom
 - You can setup a Google Classroom using a personal Gmail account.
 - [Read the information about Google Classroom](#) and how to setup your own.
 - We have limited support for this option, but users can use this if they like.

Synchronous

- Zoom Videoconferencing
 - Zoom allows you to connect with students at a distance.
 - Zoom Licensed accounts are currently reserved for faculty who will be teaching synchronously. You must setup your Basic account prior to requesting a Licensed account.
 - Just need it for office hours? The Basic account will most likely be sufficient. The 40-minute cap is only placed on meetings with more than two participants.
 - [Get more information about Zoom](#)
 - You can also get to Zoom directly from the new Express login at <https://express.tntech.edu>.
- Microsoft Teams
 - Through your TTU 365 account you can access Teams. You can create your own Team where you can chat, screen share and video conference, as well as share files.
