Session Resources

- Session will be recorded.
- Slide deck will be shared.
- We will be in the chat to answer any questions.
- Book a [consultation](#) with your instructional designer!

Agenda

- Faculty testimonial
- Before and after examples
- Two most used Creator+ features
- “Behind the Page”
- Additional tools I use to maximize Creator+

Faculty Testimonial

What do faculty think?

Dr. Andrea Arce-Trigatti

College of Education and Human Sciences

- I really enjoy using Creator+ in iLearn!
- The elements & practices provide a unique way for students to engage with the course material which offers an **engaging alternative to traditional learning methods** that help bring the readings and content to life.
- I find these activities encourage deeper engagement by:
 - offering a foundation to organize the information in helpful ways
 - allowing students to approach the material from fresh perspectives
 - making the learning experience more dynamic and overall fun!

Faculty adapt content for students.

Ask Yourself

Can I create a module and/or a
content page in iLearn?

Steps for Creating Engaging Content Pages

1. Draft the content
2. Create a module in iLearn
3. Create a "file" (which is what I call a "content page") in the module
4. Choose a template for the file
5. Type content
6. Add Creator+ elements
7. Save and View as Student

Before & After

What does it look like to transition from a .pdf, .doc, or .ppt to Creator+ content pages?

Example: .doc to interactive content page

Original .doc saved as .pdf in course

CASE STUDY I

A 50-yr-old nonsmoking male was recently invited by colleagues to participate in a 10-km trail run. He reports currently walking 40 min on Monday, Wednesday, and Friday — something he has done “for years.” His goal is to run the entire race without stopping, and he is seeking training services. He reports having what he describes as a “mild heart attack” at 45 yr old, completed cardiac rehabilitation, and has had no problems since. He takes a statin, an angiotensin-converting enzyme (ACE) inhibitor, and aspirin daily. During the last visit with his cardiologist, which took place 2 yr ago, the cardiologist noted no changes in his medical condition.

CASE STUDY II

A 22-yr-old recent college graduate is joining a gym. Since becoming an accountant 6 mo ago, she no longer walks across campus or plays intramural soccer and has concerns about her now sedentary lifestyle. Although her body mass index (BMI) is slightly above normal, she reports no significant medical history and no symptoms of any diseases, even when walking up three flights of stairs to her apartment. She would like to begin playing golf.

CASE STUDY III

A 45-yr-old former collegiate swimmer turned lifelong triathlete requests assistance with run training. His only significant medical history is a series of overuse injuries to his shoulders and Achilles tendon. In recent weeks, he notes his workouts are unusually difficult and reports feeling constriction in his chest with exertion — something he attributes to deficiencies in core strength. Upon further questioning, he explains that the chest constriction is improved with rest and that he often feels dizzy during recovery.

CASE STUDY IV

A 35-yr-old business consultant is in town for 2 wk and seeking a temporary membership at a fitness club. She and her friends have been training for a long-distance charity bike ride for the past 16 wk; she is unable to travel with her bike and she does not want to lose her fitness. She reports no current symptoms of CV or metabolic disease and has no medical history except hyperlipidemia, for which she takes a HMG-CoA reductase inhibitor (statin) daily.

Updated flip cards in course

Select each person to see if medical clearance is needed and why.

Ron

Medical clearance needed for Ron?

Taylor

Medical clearance needed for Taylor?

Yes

John is experiencing constriction in his chest with exertion and this constriction is improved with rest. He often feels dizzy during recovery. A doctor should clear him before continuing exercise.

No

Gina did not mark any conditions in Step 3 and has been participating in planned, structured physical activity for at least 30 minutes at moderate intensity on at least three days per week for at least the last three months.

What is Synthesizing?

Summary	Synthesis
Basic research technique.	Advanced research technique.
Pulls together information in order to highlight important points.	Pulls together information not only to highlight the important points, but also to draw conclusions.
Re-iterates the information.	Combines and contrasts information from different sources
Shows what the author(s) wrote.	Not only reflects your knowledge about what the author(s) wrote, but also creates something new out of two or more pieces.
Addresses one set of information (e.g. article, chapter, document) at a time. Each source remains distinct.	Combines parts and elements from a variety of sources into one unified entity.
Presents a cursory overview.	Focuses on both main ideas and details.
Demonstrates an understanding of the overall meaning.	Achieves new insight.

Adapted from Sarah Elaine Eaton (2010)

"Synthesis is about organizing the different pieces to create a beautiful mosaic, a meaning, a beauty, greater than the sum of each shiny piece." Ellin Keene

"Synthesizing is like baking a cake – all the different parts mixed together become a whole new thing." David Harris

"It is bringing together different ideas and facts and weaving them together into a tapestry, something much larger than all the threads." Ellin Keene

TAKING A PULSE

- Using the _____ and _____ fingertips, press firmly but gently on the arteries until you feel a pulse.
- Use a watch with a second hand for accurate timing.
- Count your pulse for _____ seconds (or for _____ seconds and then multiply by two to calculate).
- If you use the lower neck never press on the pulses on both sides of the lower neck at the same time to prevent blocking blood flow to the brain.

How do I choose ? which element and/or practice to use?

I ask myself: What's the learning or performance purpose of the content? What does it help the student know and/or do?

“Behind the Page”

How am I using the html toolbar, the elements, and the practices?

Exercise Preparticipation Health Screening Case Studies

On this page, you will read about how to determine if medical clearance is necessary before beginning exercise. You will read four case activities and make a decision for each person. If you prefer, you may [download a printable .pdf of this activity](#).

When assessing your client's health, you will work through four steps.

Step 1

Symptoms

Does your client experience:

- chest discomfort with exertion
- unreasonable breathlessness
- dizziness, fainting, blackouts
- ankle swelling
- unpleasant awareness of a forceful, rapid or irregular heart rate
- burning or cramping sensations in your lower legs when walking short distance

If you did mark any of these statements under the symptoms, STOP, your client should seek medical clearance before engaging in or resuming exercise. Your client may need to use a facility with a medically qualified staff.

If you did not mark any symptoms, continue to Steps 2 and 3.

Evaluating Steps 2 and 3:

- If you did not mark any of the statements in Step 3, medical clearance is not necessary.
- If you marked Step 2 "yes" and marked any of the statements in Step 3, your client may continue to exercise at light to moderate intensity without medical clearance. Medical clearance is recommended before engaging in vigorous exercise.
- If you marked Step 2 "no" and marked any of the statements in Step 3, medical clearance is recommended. Your client may need to use a facility with a medically qualified staff.

Desired exercise intensity is the final component in the preparticipation screening algorithm. Because vigorous intensity exercise is more likely to trigger acute CV events, versus light-to-moderate intensity exercise, in selected individuals, (20, 29), identifying the intensity at which a participant intends to exercise is important. Guidance is offered in the footnotes of the algorithm on the aforementioned designations as well as what constitutes light, moderate, and vigorous intensity exercise. Additional information on exercise intensity can be found in Table 6.1 of the text.

Step 4: Using the Algorithm

Read the four case studies and then answer the questions below.

Ron

Taylor

John

Gina
