 SAIC Development Team for Integration
 SAIC Clients(Government)

Tennessee Technological University:

Dr. Gannod - The Faculty Advisor
 Josh Tinker - Project Mentor
 Software Development Team - Team 01
 TTU Computer Science Department

Elevator Statement

For SAIC stakeholders **who** need to evaluate and engage with the startup companies. **The** Project Collins **is** a startup recommender **that** will provide the stakeholders with information on the startup companies.

Unlike other general management tools, **our solution/product** will provide our stakeholders with recommended startups, information about the startup companies, and how their technologies can be aligned with various SAIC projects.

Project Description

We are creating a web-based recommendation engine for SAIC's internal team to find startup companies that best fit their needs or interests. We are also creating a database to store information such as Point of Contact, company size, revenue, product or service provider, relevancy to customer/pipeline opportunity, use case relevancy, past performance, existing customers, etc. The intent of the project is to provide our customers with a recommendation engine about these companies and how their technologies can be aligned with various use cases to solve customer problems/missions.
