

Institutional Effectiveness Report 2019-20

Program: Civil & Environmental Engineering BS

College and Department: College of Engineering – Civil Engineering

Contact: Ben Mohr

Mission: The mission of the civil engineering program is to offer the strong academic content necessary to produce well-educated graduates who become innovative and productive members of society. Graduates will possess both the problem-solving skills and the fundamentals of critical thinking and analysis that are crucial for success within the framework of the civil and environmental engineering profession.

Program Goals

PEO 1. Graduates should demonstrate the ability for early career professional growth based on their grasp of fundamental concepts in civil engineering.

PEO 2. Graduates should utilize knowledge and skills to participate in civil engineering design and/or management processes.

PEO 3. Graduates should develop professionally through a commitment to life-long learning.

Student Learning Outcomes

Students should demonstrate...

1. an ability to identify, formulate, and solve complex engineering problems by applying principles of engineering, science, and mathematics
2. an ability to apply engineering design to produce solutions that meet specified needs with consideration of public health, safety, and welfare, as well as global, cultural, social, environmental, and economic factors
3. an ability to communicate effectively with a range of audiences
4. an ability to recognize ethical and professional responsibilities in engineering situations and make informed judgments, which must consider the impact of engineering solutions in global, economic, environmental, and societal contexts.
5. an ability to function effectively on a team whose members together provide leadership, create a collaborative and inclusive environment, establish goals, plan tasks, and meet objectives
6. an ability to develop and conduct appropriate experimentation, analyze and interpret data, and use engineering judgment to draw conclusions
7. an ability to acquire and apply new knowledge as needed, using appropriate learning strategies.

A departmentally developed curriculum map can be found in Appendix 1 that shows the connections between courses and student learning outcomes.

Attainment of PEO 1 is supported by Student Outcomes: 1,2,4,6

Attainment of PEO 2 is supported by Student Outcomes: 3,4,5

Attainment of PEO 3 is supported by Student Outcome: 7

Assessment Methods

1. *Course Components* are grades on a specific, recurring assignment or collection of assignments in a specific course. The assignment must be common to all faculty who teach the course.
2. *FE Exam* provides a measure of Civil Engineering content knowledge. The FE Exam topic area ratio scores provided to CEE by the National Council of Examiners for Engineering and Surveying. CEE requires all students to take the FE exam, so our scores are representative of all students.
3. *Final Course Grades* are accumulated across a graduating class. That is, the average grade in a specific course for all the students who graduated in a given term.
4. *Course Instructional Outcome Surveys and Senior Exit Surveys* are Likert scale survey questions. All have 4 answers: Strongly Disagree, Disagree, Agree, and Strongly Agree. CEE is experimenting with annual alumni surveys due to low response rates.

Expected Levels of Attainment: Because of scale differences between metrics, CEE has implemented color-coding to aid in the review process. The color coding and the criteria used in its application are found below:

SO Attainment Color Coding Criteria

Color Code			
Attainment Level	Unacceptable	Acceptable	Excellent
Metric	Criteria		
Course Components (Out of 100)	Average < 70	Average ≥ 70	Average ≥ 80
FE Exam Ratio Scores (CEE Performance Index / Comparator)	Ratio Score < 0.80	Ratio Score ≥ 0.80	Ratio Score ≥ 0.90
Final Course Grades (4-Point Grading Scale)	Average < 2.50	Average ≥ 2.50	Average ≥ 2.75
Course Instructional Outcome Surveys (Out of 4)	Average < 2.50	Average ≥ 2.50	Average ≥ 2.75
Senior Exit Surveys (Out of 4)	Average < 2.50	Average ≥ 2.50	Average ≥ 2.75

The faculty chose to include multiple metrics for each SLO. Multiple metrics help the faculty to avoid unneeded reactions to statistical outliers that occur during any evaluation. As such, the occurrence of a single Low or Unsatisfactory rating will not necessarily require a response.

The thresholds for a required response are:

- Multiple metrics in the red in a single academic year for a given outcome
- Single metrics in the red in consecutive academic years for a given outcome
- Multiple metrics that remain “in the yellow” (i.e., satisfactory) in multiple academic years for a given outcome. Yellow followed by red and vice versa are considered multiple “satisfactory” years as well as single years in the red.

In addition to these required responses, there are three additional ways in which responses may be initiated. During their reviews of the metrics, the Chair, the Faculty, or the Advisory Board can request action or further investigation even if all the metrics are Excellent. This flexibility allows the opportunity to begin investigations before they are required, hopefully reducing our response time in applying improvements. It also allows for improvements even when there are no issues.

Annual Schedule for Continuous Improvement

A new annual continuous improvement review schedule was proposed and introduced in Fall 2014. This new schedule leverages our existing year-round continuous improvement process and adds program-level reviews to that calendar. As noted above, this portion of the continuous improvement process continued despite the change-of-leadership issues, which affected a previous mid-cycle review.

Reminders of the new schedule will be integrated into the typical meeting agendas so that any future changes in departmental leadership should not result in lapses. There are two key events in the new schedule that will provide for program-level assessment, the CEE Fall Faculty Retreat and the CEE Fall Advisory Board Meeting. At each of these meetings, the CEE Chair presents all data from the prior academic year for review. If data indicate a need for programmatic review or action, or if the faculty or the Advisory Board wish to initiate a response where none is required, the CEE ABET committee will be notified of the need to initiate appropriate investigations and provide recommendations for improvement to the CEE faculty and/or the Advisory Board at the beginning of the Spring semester, if possible.

While the actual process is continuous, its components are presented herein based on the academic calendar, i.e., starting in August. In August, the CEE Faculty Fall Retreat includes a faculty review of all Student Outcome metrics plus any supplemental information deemed significant by the chair. This allows the faculty to determine if any required or desired actions are needed and to then assign such tasks to the ABET Committee. The faculty also review our Program Educational Objectives and departmental Vision and/or Mission statements to ensure they remain current. This meeting includes discussion of recent implementations from past reviews and continuing discussion of new actions under consideration as needed.

In October/November, the Advisory Board reviews Student Outcome metrics to add their insight and requests for investigation to those of the faculty. They also review any planned or recently implemented program changes.

The ABET Committee meets as needed through the fall semester to address any assigned tasks.

In March/April, the CEE Chair reviews Fall (July-December) FE Exam results. The Advisory Board also reviews both Program Educational Objectives and departmental Mission/Vision statements to give input for the upcoming Fall Faculty Retreat.

In June/July, Spring FE Results are typically received and staff tabulate all Student Outcome metrics from the prior academic year. These metrics are then reviewed by the Chair in preparation for the Fall Faculty Retreat, at which point the cycle begins again.

This schedule provides for annual opportunities to identify and react to both course-level and program-level issues as they become apparent. Thus, in addition to helping reduce dependence on a large-scale mid-cycle and end-of-cycle review, the new schedule allows for faster response to program-level issues.

Results

SO 1. An ability to identify, formulate, and solve complex engineering problems by applying principles of engineering, science, and mathematics

In order to capture all parts of an engineering problem (and identify any potential issues) as indicated in SO1, the outcome was broken up into three parts:

1. "Identify" – the CEE 4950 Interim 1 Technical Report grade was used as it would be expected that students have successfully identified the engineering problem
2. "Formulate" – the CEE 4950 Interim 2 Technical Report grade was used as, at this point, students would have devised a methodology for solving the engineering problem
3. "Solve" – the CEE 4950 Final Report grade should give an indication regarding the students' ability to solve the engineering problem

All metrics for this outcome are shown in the table below:

ABET 1. an ability to identify, formulate, and solve complex engineering problems by applying principles of engineering, science, and mathematics

	CEE 4630 Traffic Engineering	3.22		3.01		3.82		3.32			

CEE 4310 Steel Design and CEE 4320 Concrete Design final course grades are moving towards improvement. The multiple red metrics were due to the departure of two structural faculty in 2016-2017. New faculty members are now in place and metrics seem to be improving. We will continue to monitor progress on these metrics. No other metrics met the threshold for required action.

SLO 2. An ability to apply engineering design to produce solutions that meet specified needs with consideration of public health, safety, and welfare, as well as global, cultural, social, environmental, and economic factors

In order to capture all parts of an engineering problem (and identify any potential issues) as indicated in SO1, the outcome was broken up into three parts:

1. "Identify" – the CEE 4950 Interim 1 Technical Report grade was used as it would be expected that students have successfully identified the engineering problem
2. "Formulate" – the CEE 4950 Interim 2 Technical Report grade was used as, at this point, students would have devised a methodology for solving the engineering problem
3. "Solve" – the CEE 4950 Final Report grade should give an indication regarding the students' ability to solve the engineering problem

All metrics for this outcome are shown in the table below:

ABET 2. an ability to apply engineering design to produce solutions that meet specified needs with consideration of public health, safety, and welfare, as well as global, cultural, social, environmental, and economic factors

	CEE 4630 Traffic Engineering	3.22		3.01		3.82		3.32			
* This course is typically offered only during spring semesters. First, data were not tabulated prior to spring 2017. Second, the course was not											

As discussed on SO 1, CEE 4310 Steel Design and CEE 4320 Concrete Design final course grades are moving towards improvement as new faculty are in place and acclimating. We will continue to monitor progress on these metrics.

Students demonstrated excellent outcomes on the new CEE 4950 component related to global, cultural, social, environmental, and economic factors. Since this is a new metric, despite new issues being identified thus far, it is anticipated that the assessment will continue to be tweaked and modified in addition to increased focused throughout the course and curriculum regarding these needs and factors.

No other metrics met the threshold for required action.

SO 3. An ability to communicate effectively with a range of audiences

Communication skills are assessed separately for both oral and written in CEE 4950. Written communication skills are directly measured for both the technical report and poster presentation. The oral presentation component has been separated out as “Presentation Skills”. The “Quality of Slides” component functions as a measure of both written and oral communication skills.

All metrics for this outcome are shown in the table below:

ABET 3. an ability to communicate effectively with a range of audiences [G]		2015-16		2016-17		2017-18		2018-19		2019-20	
		Fall	Spr	Fall	Spr	Fall	Spr	Fall	Spr	Fall	Spr
CEE 4950 Senior Design Course Components											
	CEE 4950 Senior Design - Written Report (Technical Writing)	81.4	83.0	74.8	86.0	80.1	87.4	86.5	84.4		
	CEE 4950 Senior Design - Oral Presentation (Presentation Skills)			89.9		93.0		90.0		93.3	
	CEE 4950 Senior Design - Oral Presentation (Quality of Slides)			91.9		93.8		89.3		95.2	
	CEE 4950 Senior Design - Poster Presentation		91.0	92.4	88.2	93.2	90.2	91.6	90.7	90.1	
Senior Exit Surveys											
	Single survey question covers (3) - Writing								3.35	3.38	3.48
	Single survey question covers (3) - Oral								3.29	3.50	3.36
Course Instructional Outcome Surveys											
	CEE 4950 Senior Design - Oral Communication	3.82	3.72	3.70	3.81	3.69	3.90	3.38	3.82	3.70	
	CEE 4950 Senior Design - Written Communication	3.82	3.90	3.43	3.78	3.61	3.90	2.88	3.59	3.52	
Final Course Grades											
	PC 2500 - Oral Communication	4.00	3.86	4.00	3.82	4.00	4.00	4.00	4.00	3.64	3.60
	SPCH 2410 - Oral Communication	3.50	3.20	3.20	3.14	2.89	3.23	3.00	3.50	3.71	3.33

All metrics met the excellent threshold for the 2019-2020 year. Students continue to demonstrate strong communication skills.

SO 4. An ability to recognize ethical and professional responsibilities in engineering situations and make informed judgments, which must consider the impact of engineering solutions in global, economic, environmental, and societal contexts

In order to capture different parts of SO 4, the outcome is split into two parts, with their respective direct assessment metric.

1. "an ability to recognize ethical and professional responsibilities in engineering situations and make informed judgments..."
2. "...which must consider the impact of engineering solutions in global, economic, environmental, and societal contexts"

For both parts of SO 4, CEE 4920 Professionalism and Ethics was used.

All metrics for this outcome are shown in the table below:

ABET 4. an ability to recognize ethical and professional responsibilities in engineering situations and make informed judgments, which must consider the impact of engineering solutions in global, economic, environmental, and societal contexts											
		2015-16		2016-17		2017-18		2018-19		2019-20

Course Instructional Outcome Surveys											
CEE 4950 Senior Design		3.77	3.80	3.60	3.77	3.54	3.88	3.40	3.69	3.74	

For the Spring 2020 semester, two new assignments were planned to be given to students in order to more directly assess this outcome. Unfortunately, due to the COVID situation and transition to online course content, these assessments were not conducted but are planned for future semesters.

Given the current metrics, none met the threshold for a required action.

SO 5. An ability to function effectively on a team whose members together provide leadership, create a collaborative and inclusive environment, establish goals, plan tasks, and meet objectives

SO 5 is broken into three parts for assessment.

1. "an ability to function effectively on a team whose members together provide leadership..." – CEE 4950 Senior Design focuses on leadership.
2. "...create a collaborative and inclusive environment..." – Peer evaluations are a part of our CEE 4950 Senior Design grading scheme. Students directly assess each other regarding their group.
3. "...establish goals, plan tasks, and meet objectives..." – Students are assessed on management principles in CEE 4950 Senior Design.

ABET 5. an ability to function effectively on a team whose members together provide leadership, create a collaborative and inclusive environment, establish goals, plan tasks, and meet objectives [D]		2015-16		2016-17		2017-18		2018-19		2019-20	
		Fall	Spr	Fall	Spr	Fall	Spr	Fall	Spr	Fall	Spr
		CEE 4950 Senior Design Course Components									
	CEE 4950 Senior Design - Leadership paper		82.0	73.6	85.0	79.7	77.0	92.6	75.0	95.0	
	CEE 4950 Senior Design - Management paper		75.0	72.8	91.0	85.7	79.0	77.0	88.0	93.0	
	CEE 4950 Senior Design - Project Mgmt (MS Project)									80.0	
	CEE 4950 Senior Design Project (Peer Eval)		87.4	88.0	88.0	91.0	77.3	92.0	81.6	95.0	94.7
Instructional Outcome Survey Question(s)											
	CEE 4950 Senior Design ⁴		3.77	3.80	3.60	3.77	3.54	3.88	3.40	3.69	3.69
Senior Exit Surveys											
	Single survey question covers leadership								3.36	3.46	3.52
	Single survey question covers collaborative and inclusive environment								3.46	3.58	3.5
	Single survey question covers "establish goals, plan tasks, and meet objectives"								3.50	3.67	3.48

A new assessment was added in Fall 2019 to support student application of management principles. In addition, to increase focus on these management principles, in Fall 2019, students were required to further apply this portion of the student outcome by creating a project management schedule in Microsoft Project. This schedule was assessed by both mentors and faculty. Students demonstrated strong performance in the new assessment. The metric will continue to be improved upon in future semesters.

No metrics fell below the excellent threshold for 2019-2020.

SO 6. An ability to develop and conduct appropriate experimentation, analyze and interpret data, and use engineering judgment to draw conclusions

In order to capture different parts of SO 6, the outcome was split into three parts, with their respective direct assessment metric. Previously, assessment was conducted primarily using the final course grade or final lab component grade for those courses containing a laboratory component. In essence, all parts of the student outcome were lumped together. In order to extrapolate any potential issues, an attempt was made to focus exclusively on four lab-based courses where formal lab reports are submitted by the students. Therefore, for each of the four courses, the final lab report was chosen as the most appropriate measure, broken down into three parts.

1. "an ability to develop and conduct appropriate experimentation, ..." – The Introduction and Methodology sections were chosen to represent the "develop and conduct" portions of this student outcome.
2. "...analyze and interpret data..." – The Results and Discussion section(s) of respective lab reports were chosen to represent the "analyze and interpret" portions of this student outcome.
3. "...and use engineering judgment to draw conclusions." – The Conclusion section was used to assess this portion of the student outcome.

ABET 6. an ability to develop and conduct appropriate experimentation, analyze and interpret data, and use engineering judgment to draw conclusions

	Single survey question covers "develop and conduct"								3.14	3.50	3.38
	Single survey question covers "analyze and interpret"								3.50	3.67	3.56
	Single survey question covers "draw conclusions"								3.21	3.75	3.60

Because of the differences between labs and faculty teaching those labs, coordination of activities took longer than the other student outcomes. By the beginning of January 2020, all labs had a plan for documenting this student outcome; however, due to COVID, not all labs were conducted and subsequently, data are unavailable for some labs. At the same time, some data could be collected from prior semesters. Moving forward, it is expected that all data will be collected.

In order to "apply" new knowledge (as needed for CEE 4950), it is implied that students must "acquire" that knowledge first. Thus, the department considered separating out (and directly assess) the "acquire" and "apply" portions of this student outcome for CEE 4950. While multiple metrics were considered, the department could not identify an appropriate way to get a valid direct assessment in CEE 4950. In other words, assessment data could be produced; however, due to the variability in CEE 4950 design projects, student backgrounds, and mentor/faculty reviews, no rubric could be produced that would be particularly valid. In the case that any of the assessment metrics indicate a need for review and/or improvement, this topic will be revisited. Currently, all metrics meet the excellent threshold.

Modifications for Improvement:*SO 1 and SO 2*

CEE 4310 Steel Design and 4320 Concrete Design final course grades had multiple reds for the 2018-19. Recent faculty hires and time for those new hires to acclimate have reversed the trend. The 2019-20 academic year showed a recovery period that CEE expects to continue.

SO 5

An embedded course assignment in CEE 4950 Senior Design is used to assess how well students can apply management design principles. Ratings of the measure have fluctuated between “Acceptable” and “Excellent” over the past four assessment cycles. As such, the faculty decided to add an additional assignment to support students’ application of management principles and include the assignment as an additional assessment measure for this learning outcome. Starting Fall 2019, students are required to further apply management design principles by creating a project management schedule in Microsoft Project. Students demonstrated strong performance in the new assessment. The metric will continue to be improved upon in future semesters.
