

Five Facts about HPV

MARCH 4TH IS
INTERNATIONAL
HPV
AWARENESS
DAY

4 out of 5 sexually active adults will contract Human Papillomavirus (HPV) in their lifetime

A person with HPV may show **no signs or symptoms**

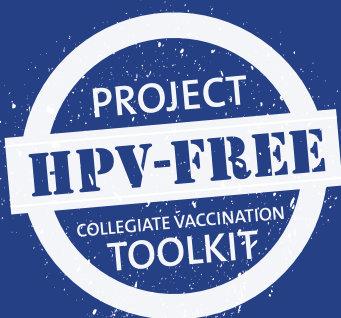

HPV infection can cause **genital warts and six types of cancer**

HPV vaccination is safe, effective, and recommended **for ages 9 – 26 years old**

It's not too late to get vaccinated against HPV, even if you've already been sexually active
