BARD

THE US-ISRAEL BINATIONAL AGRICULTURAL
RESEARCH AND DEVELOPMENT FUND

Call for Proposals

Call for proposals for the next round of funding in 2021. Our programs are open to research scientists, graduate students, and postdocs. We fund research and development in agriculture.

The US Israel Binational Agricultural R&D Fund

BARD projects focus on increasing agricultural productivity, particularly in hot and arid climates, and emphasize plant and animal health, food quality and safety, and environmental issues. BARD also supports international workshops, and offers fellowships for postdoctoral research, senior research scientists and graduate students.

The primary rationale of BARD is bringing together American and Israeli scientists to address important agricultural challenges that concern both countries. Fostering this cooperation creates a synergy which generates results that would not be possible had the scientists worked independently.

Everything You Need to Know in order to apply for BARD funding

We are happy to share the recording of the "Application Webinar", an introduction session on BARD (the U.S Israel Bi-national Agricultural Research and Development fund) which is now available online. This session covers: the funds mission, the different funding opportunities, the research priorities, who can apply, the proposal evaluation process and timeline, and useful tips for writing a successful proposal.

BARD Research Grants

Funds projects conducted cooperatively by US and Israeli scientists. Covers all phases of agricultural R&D including strategic or applied research.

Award duration: 3 years. One year feasibility studies are also funded.

Maximum award: \$310,000 for a 3-year grant.

- The following research areas were identified by the Board of Directors as top priorities for the coming years:
- Increased Efficiency of Agricultural Production
- Protection of Plants and Animals Against Biotic and Abiotic Stress
- Food Quality, Safety and Security Water Quality & Quantity
- Functional Genomics and Proteomics
- Sensors and Robotics Sustainable Bio-Energy Systems
